HOME / GP DIETS / GP 300 - 500 MICRON ARTEMIA TRANSITION DIET

"Active Spheres" Golden Pearl 300 - 500 Micron Artemia Transition

Careful formulation and precision sizing make the Original Golden Pearl Diets "Active Spheres" a choice for serious aquarists with exacting requirements. An excellent choice for marine and freshwater finfish, breeding and zebrafish facilities. The highest quality formulation, the precision sizing, and the neutrally bouyant properties of agglomerated particles allows you to successfully replace live food in most marine and freshwater systems.

Breeders! Reduce your feeding anxiety. We provide complete nutrition and proper particle size as your fry grow. And you can save money in the process! Our **FOUR PACK** consists of Original Golden Pearls sized 100-200 Micron, GP 200-300 Micron, GP 300-500 Micron, and Original Golden Pearl 500-800 Micron - all in the 2 oz. size. A perfect range of particle sizes to see most fish from the free swimming stage to the juvenile, post-artemia stage.

Ingredients: marine fish, krill (23%), fish roe, soy lecithin, yeast autolysate, micro-algae, fish gelatin, squid meal, hydrogenated vegetable fat, vitamins and minerals, antioxidants.

Proximate analysis: Protein, 55%; Lipids, 15%; Ash, 12%; Moisture, 8%; Vitamin C, 2550 ppm; Vitamin E, 425 ppm; EPA,10mg/g; DHA, 12 mg/g.
